Abstract	<p><i>Currently, the macroeconomic indicators for results are determined and analysed by the System of National Accounts (SNA), a macroeconomic analysis system which meets the demands of information and economic analysis of the companies based on market economy. The National Accounts (NC) requires the main filing system and macroeconomic analysis used by most of the countries within international statistics. The macroeconomic indicators are: the domestic product, private consumption, government consumption gross investment (gross capital formation), national product and disposable income personal income, household income, personal income of the population.</i></p> <p><i>The macro-economic indicators can be analysed according to the following aspects: development analysis, economic dynamics, structure analysis and changes in economic structure, calculation and analysis of input use efficiency; comparison level, comparison of structure and national economic development to other countries.</i></p>
